

Vidyavardhini's College of Engineering & Technology

Founder President Late Padmashri H. G. Vartak

Approved by AICTE, DTE Maharashtra and Affiliated to University of Mumbai
NAAC accredited, 4 Programmes Accredited by NBA

Criteria Number: 3

Criteria Name: **Research, Innovations and Extension**

Sub criteria Number: 3.4.3

Sub-criteria Name: **Extension Activities**

3.4.3 Number of extension and outreach programs conducted by the institution through organized forums including NSS/NCC with involvement of community during the last five years

19th February 1630- a date that will remain forever
line on the foundation of Indian History, can
never be forgotten not only by the Marathas
or the Indians but by anyone who is interested
to study history of visionary kings and leaders.
It was on this day a man of extraordinary
skills, the great Chhatrapati Shivaji Maharaj
was born on the shimmering fort of Junnar.
Chhatrapati was well known for his manage-
ment in various aspects. He exercised planning,
organization, control over all the resources.
Under the leadership of Chhatrapati, the
entire Maratha army and cantons were united
with a common dream of "Swarajya" and he
maintained it with no caste or social economical
differentiation. Most of his officers were
Hindus, but a number of Muslims also held
major positions like artillery chief. Also when
Chhatrapati visited Ajmer to attend Shivaji's 50th
birthday celebration, he met British bodyguard
was Muzaffar Khan - a muslim teenager.
It's worth noting that he gave hand of
his own daughter to a converted hindu. He
honoured women, no one under his rule was
allowed to dishonour women. Therefore incidents
of rape or molestation were out of question, because
rapists or molesters were severely punished.

g major issues like rape, economy failure, does exists Men and women have equal ch will help our nation to become a better equally competent then why do we lack to

one who actually suffers gender inequality.They are equally responsible for their actions in this emerging world.Why do men who are actually innocent suffer because of the ones who are guilty?Why do women play girl card to save themselves?Why is a woman objectified in this era ?Why do we depend on men for our livelihood?Why do we expect men to serve us when we are equally responsible for it.Women playing girl card should be punished because it not only highlights a girl being saved after causing major issues but also makes it worse for the boy to face this judgemental world.Boys who are innocent should be saved from such danger which will definitely lead us to become a gender equal society/world.On the other hand women after marriages are not recruited by companies because of the fear of starting a family.Women who faces such issues not only leads them to snatching of their golden opportunity of being independent but also makes them feel responsible for something which they are not.They should be supported because they create the world and help the world to become a better one.Why is a boy asked about his salary structure when he is about to marry a girl?Why not realising that they both can uplift their families in a well defined manner.Both can not only fulfill the basic requirements but also fulfill their wishes.Why celebrating only women's day why not celebrating men's day?They equally contribute and strive hard to feed their family and provide them the basic necessities.We should not forget the bravery acts of Chhatrapati Shivaji Maharaj but also embrace the braveness of Rani Laxmi Bai.We should equally respect transgenders, lesbians and gays.Our law accept people as they are.We don't need to pretend to make others happy.This provides today's youth a opportunity to think of themselves in a broader aspects.We should not look upon those people.Transgenders are born with that .They have no role in manipulating their body parts.Gays and lesbians develop their habit during their growing course of time.We should help them and create a place for them in the society which is polite and accepting towards them rather being rude and harsh.We should work for their upliftment so that no parent feels ashamed to accept their kids with such defaults.Today we experience Amazing transformation of male into female and vice versa.This shows that men and women equally understand each other's worth and want to experience something amazing in their lifetime.Both should realise that they do lack in something of the other and accepting that will help them to become the building block of each other in their hard times.We have come across witnessing several generations on the basis of their equality ,now it's time for us to become the one which will not only help men but also women to walk shoulder to shoulder in this world full of competition and full of struggle.We always hear people saying every successful man has a women behind him let's make our world a place where men will equally support women to achieve great things in their life and will not feel ashamed if their accomplishments go less in front of their partners.Lets remember and embrace the words said by legendary "Micheal Jackson" : "heal the world make it a better place for you and for me and the entire human race".

Transmission of COVID-19

Disease	Average number of people infected per person
Measles	12-18
COVID-19	1.5-4.5
SARS	2.8-4.9
Influenza	1.4-1.6
Seasonal flu	0.5-2.1

- One person infected with COVID-19 can infect on an average 1.5-4.5 other people.
- This is higher than the infection rate for seasonal flu and other respiratory syndromes of recent times.

TOBACCO IMPACT ON COVID 19

TOBACCO MAY BE AT INCREASED RISK OF BEING INFECTED WITH THE CORONAVIRUS.
 Some characteristics of tobacco use could increase the risk of being infected with COVID-19.

- Tobacco use weakens the immune system of the body, making it more susceptible to infections, which could increase the severity of the disease.
- Tobacco use is associated with chronic obstructive pulmonary disease (COPD) and other respiratory conditions, which could increase the severity of the disease.
- People with poor lung function have a higher risk of complications from COVID-19.

TOBACCO USE MAY BE AT INCREASED RISK OF COMPLICATIONS WITH COVID-19.
 People with poor lung function have a higher risk of complications from COVID-19.

- People with poor lung function have a higher risk of complications from COVID-19.
- People with poor lung function have a higher risk of complications from COVID-19.
- People with poor lung function have a higher risk of complications from COVID-19.

SMOKING EXPOSES TO SECOND-HAND SMOKE (SHS) WHICH IS KNOWN TO CAUSE AN INCREASED RISK OF COVID-19.
 Second-hand smoke (SHS) is known to cause an increased risk of COVID-19.

- Second-hand smoke (SHS) is known to cause an increased risk of COVID-19.
- Second-hand smoke (SHS) is known to cause an increased risk of COVID-19.
- Second-hand smoke (SHS) is known to cause an increased risk of COVID-19.

PREVENTION OF COVID-19 IS CRUCIAL TO MAINTAINING THE HEALTH OF THE COMMUNITY.
 Preventing COVID-19 is crucial to maintaining the health of the community.

- Preventing COVID-19 is crucial to maintaining the health of the community.
- Preventing COVID-19 is crucial to maintaining the health of the community.
- Preventing COVID-19 is crucial to maintaining the health of the community.

INDIA: Percentage of respondents who intend to try or have already tried using nicotine replacement therapies such as patches or gum to quit smoking.

Overall	64%
Women	78%

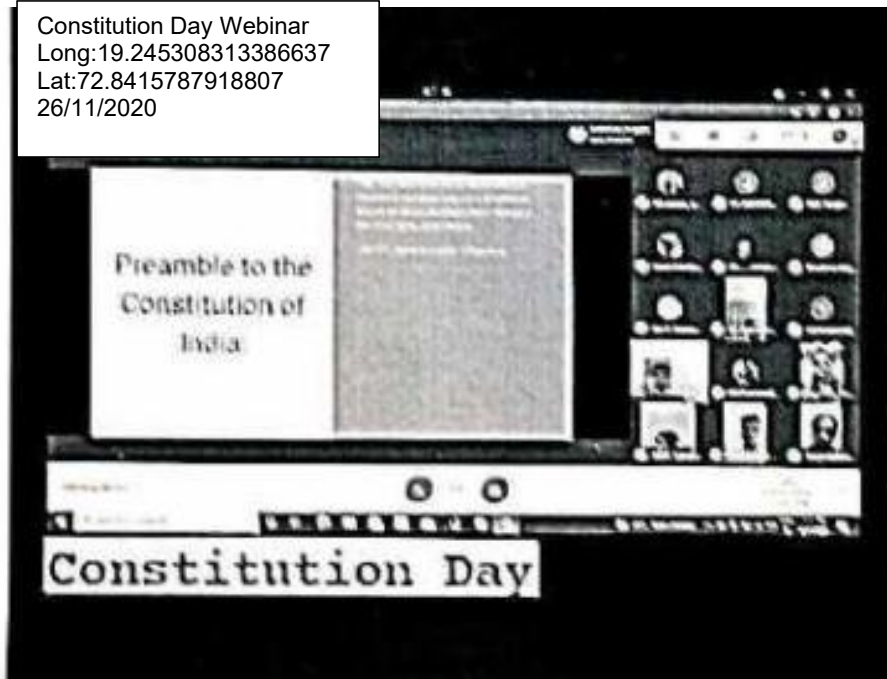

GLOBAL: Quitting nicotine and tobacco products during the COVID-19 lockdown.

	US	UK	Italy	India	South Africa
Considered quitting	43%	45%	44%	67%	56%
Attempted to quit	31%	37%	39%	69%	48%

Diagnosis and Treatment of AIDS:-

What are types of Diagnosis for AIDS?

If you receive a diagnosis of HIV/AIDS, several tests can help your doctor determine the stage of your disease and the best treatment, including:

- CD4 T cell count. CD4 T cells are white blood cells that are specifically targeted and destroyed by HIV. Even if you have no symptoms, HIV infection progresses to AIDS when your CD4 T cell count drops below 200.
- Viral load (HIV RNA). This test measures the amount of virus in your blood. After starting HIV treatment the goal is to have an undetectable viral load. This significantly reduces your chances of opportunistic infection and other HIV-related complications.
- Drug resistance. Some strains of HIV are resistant to medications. This test helps your doctor determine if your specific form of the virus has resistance and guides treatment decisions.

What can be done to Treat a person suffering from AIDS?

- At this time, there is no cure for AIDS, but medications are effective in fighting HIV and its complications. Treatments are designed to reduce HIV in your body, keep your immune system as healthy as possible and decrease the complications you may develop.
- You and your doctor will work together to develop a treatment plan that best meets your needs. Three main factors will be considered when designing your treatment plan:
 - Your willingness and readiness to begin therapy.
 - The stage of your disease.
 - Other health problems.

Precautions to be taken to avoid AIDS?

There is no vaccine to prevent HIV infection and no cure for AIDS. But you can protect yourself and others from infection. To help prevent the spread of HIV:

- Use treatment as prevention (TasP). If you're living with HIV, taking HIV medication can keep your partner from becoming infected with the virus. If you make sure your viral load stays undetectable — a blood test doesn't show any virus — you won't transmit the virus to anyone else. Using TasP means taking your medication exactly as prescribed and getting regular CD4 tests.
- Use post-exposure prophylaxis (PEP) if you've been exposed to HIV. If you think you've been exposed through sex, needles or in the workplace, contact your doctor or go to the emergency department. Taking PEP as soon as possible within the first 72 hours can greatly reduce your risk of becoming infected with HIV. You will need to take medication for 28 days.
- Use a clean needle. If you use a needle to inject drugs, make sure it's sterile and don't share it. Take advantage of needle-exchange programs in your community. Consider seeking help for your drug use.
- If you're pregnant, get medical care right away. If you're HIV-positive, you may pass the infection to your baby. But if you receive treatment during pregnancy, you can significantly cut your baby's risk.

How is AIDS getting Transmitted and what are its ill effects?

- HIV is caused by a virus. It can spread through sexual contact or blood, or from mother to child during pregnancy, childbirth or breast-feeding.
- HIV destroys CD4 T cells — white blood cells that play a large role in helping your body fight disease. The fewer CD4 T cells you have, the weaker your immune system becomes.
- You can have an HIV infection, with few or no symptoms, for years before it turns into AIDS. AIDS is diagnosed when the CD4 T cell count falls below 200 or you have an AIDS-defining complication, such as a serious infection or cancer.
