## Program: SE Information Technology Engineering

## Curriculum Scheme: Revised 2016

Examination: Second Year Semester III

## Course Code: SEITC303

Time: 2-hour

Course Name: Data Structures
Max. Marks: 80

Note to the students: -1 . All the Questions are compulsory.
2. Q1. To Q20 carries 2 marks each.

| Q1. | In the linked list implementation of a queue, where does a new element be inserted? |
| :--- | :--- |
| Option A: | At the head of the linked list. |
| Option B: | At the tail of the linked list. |
| Option C: | At the center position of the linked list. |
| Option D: | Anywhere in the linked list. |
|  |  |
| Q2. | ADT is called as Abstract because ..... |
| Option A: | It is completely independent data type. |
| Option B: | It is collection of different data types. |
| Option C: | Implementation details are hidden. |
| Option D: | It is based on primitive data types. |
|  |  |
| Q3. | The Overflow condition to insert element in Circular queue is: |
| Option A: | Front $=0$ and Rear $!=$ Max -1 |
| Option B: | Front $=-1$ and Rear $=$ Max -1 |
| Option C: | Front $=-1$ and Rear $=-1$ |
| Option D: | Front $=0$ and Rear $=$ Max -1 |
|  |  |

| Q4. | The time complexity for the following nested loop is: for $(\mathrm{i}=0 ; \mathrm{i}<100 ; \mathrm{i}++)$ for $(\mathrm{j}=0 ; \mathrm{j}<\mathrm{i} ; \mathrm{j}++)$ |
| :--- | :--- |
| Option A: | $\mathrm{O}($ log n) |
| Option B: | $\mathrm{O}(\mathrm{n}$ log n) |
| Option C: | $\mathrm{O}((\mathrm{n}+1) / 2)$ |
| Option D: | $\mathrm{O}(\mathrm{n}$ *(n+1)/2) |
|  |  |
| Q5. | The position of the queue from which an element is deleted is called as? |
| Option A: | Rear |
| Option B: | Front |
| Option C: | Top |
| Option D: | Mid |
| Q6. | Fill in the Blanks: The time complexity of an algorithm is the running time given as a function |
| of |  |
| Option A: | Output size |
| Option A: | Recurser instances of different problems |
| Option B: | Larger instances of the same problem |
| Option C: | Smaller instances of the same problem |
| Option D: | Smaller instances of different problems |
| Option B: | Output space |
| Oproblem depends on |  |
| Option A: | a technique for overcoming internal fragmentation |
| Option D: | Input size |
| Option B: | a paging technique |
| Option C: | a technique for overcoming external fragmentation |
| Option D: | a technique for overcoming fatal error |

|  |  |
| :---: | :---: |
| Q9. | In recursion, the condition for which the function will stop calling itself is |
| Option A: | Best case |
| Option B: | Worst case |
| Option C: | Base case |
| Option D: | There is no such condition |
|  |  |
| Q10. | Selection sort first finds the ___ element in the list and put it in the first position. |
| Option A: | Middle |
| Option B: | Largest |
| Option C: | Last |
| Option D: | Smallest |
|  |  |
| Q11. | For merging two sorted lists of size $m$ and $n$ into sorted list of size $m+n$, we require comparisons of $\qquad$ . |
| Option A: | $\mathrm{O}(\mathrm{m} * \mathrm{n})$ |
| Option B: | $\mathrm{O}(\log \mathrm{m} * \mathrm{n})$ |
| Option C: | For merging two sorted lists of size $m$ and $n$ into sorted list of size $m+n$, we require comparisons of $\qquad$ . 1 point |
| Option D: | $\mathrm{O}(\mathrm{m} * \mathrm{n})$ |
|  |  |
| Q12. | In __, search start at the beginning of the list and check every element in the list. |
| Option A: | Linear Search |
| Option B: | Binary Search |
| Option C: | Hash Search |
| Option D: | Binary Tree Search |
|  |  |
| Q13. | What data structure would you mostly likely see in a non recursive implementation of a recursive algorithm? |
| Option A: | Linked List |
| Option B: | Stack |
| Option C: | Queue |
| Option D: | Tree |
|  |  |
| Q14. | In the Polynomial linked list, the $\qquad$ of the polynomial are defined as the data node of the list. |
| Option A: | coefficients and exponents |
| Option B: | variables and exponents |
| Option C: | variables and coefficients |
| Option D: | operators |
|  |  |
| Q15. | What is the postfix expression for the corresponding infix expression? $\mathrm{a}+\mathrm{b} * \mathrm{c}+(\mathrm{d} * \mathrm{e})$ |
| Option A: | $\mathrm{abc}^{*}+\mathrm{de}^{*}+$ |
| Option B: | abc+*de*+ |

| Option C: | a+bc*de+* |
| :---: | :---: |
| Option D: | abc*+(de)*+ |
| Q16. | The number of the edges from the root to the node is called of the tree. |
| Option A: | Height |
| Option B: | Depth |
| Option C: | Length |
| Option D: | Width |
| Q17. | In a full binary tree, if number of internal nodes is I, then number of leaves L are... |
| Option A: | $\mathrm{L}=2$ * I |
| Option B: | $L=I-1$ |
| Option C: | $\mathrm{L}=\mathrm{I}+1$ |
| Option D: | $\mathrm{L}=2$ * l - |
| Q18. | A threaded binary tree is a binary tree in which every node that does not have right child has a thread to it's $\qquad$ . |
| Option A: | Pre-order successor |
| Option B: | In-order successor |
| Option C: | In-order predecessor |
| Option D: | Post-order successor |
|  |  |
| Q19. | An adjacency matrix representation of a graph cannot contain information of: |
| Option A: | Nodes |
| Option B: | Edges |
| Option C: | Direction of edges |
| Option D: | Parallel edges |
|  |  |
| Q20. | What is the number of edges present in a complete graph having n vertices? |
| Option A: | $(\mathrm{n} *(\mathrm{n}+1) \mathrm{s} / 2$ |
| Option B: | $(\mathrm{n} *(\mathrm{n}-1) \mathrm{)} / 2$ |
| Option C: | $(\mathrm{n}+1) / 2$ |
| Option D: | $\mathrm{n}+1$ |
|  |  |
| Q21. | Given a string, reverse it using a stack. For example, the string "structures" should be converted to "serutcurts". Write a C program. (5 marks) |
|  |  |
| Q22. | Insert the following elements in a AVL search tree: $40,23,32,84,55,88,46,71,57$. (10 marks) |
|  |  |
| Q23. | Construct the binary tree from the traversals given. <br> Postorder: C B E H GIFD A <br> Inorder: B C A E D G HFI |
| Q24. | Translate the given infix expression into an equivalent postfix expression. (10 marks) $(a+b * c-d) /(e * f)$ |

|  |  |  |
| :--- | :--- | :--- |
| Q25. | Arrange the given elements in ascending order using Radix sort. <br> $361,12,527,143,9,768,348$. | (5 marks) |
|  |  |  |
| Q26. | Write a C program for Quick sort. | (5 marks) |
