University of Mumbai Examination May-June 2021 under cluster 9 (FAMT) Examinations Commencing from 1st June Program: Mechanical Engineering Curriculum Scheme: Rev2016 Examination: TE Semester VI Course Code MEC602 and Course Name: Machine Design-I

Time: 2 hour

Max. Marks: 80

| Q1. | Choose the correct option for following questions. All the Questions are compulsory and carry equal marks | | |
|-----------|---|--|--|
| | | | |
| 1. | The ratio of the ultimate stress to the design stress is known as | | |
| Option A: | elastic limit | | |
| Option B: | strain | | |
| Option C: | factor of safety | | |
| Option D: | bulk modulus | | |
| | | | |
| 2. | In cyclic loading, stress concentration is more serious in | | |
| Option A: | brittle materials | | |
| Option B: | ductile materials | | |
| Option C: | brittle as well as ductile materials | | |
| Option D: | elastic materials | | |
| | | | |
| 3. | In a thick cylindrical shell, the maximum radial stress at the outer surfaces of the | | |
| | shell is | | |
| Option A: | zero | | |
| Option B: | p | | |
| Option C: | -p | | |
| Option D: | 2 <i>p</i> | | |
| | | | |
| 4. | Which of the following statement is incorrect in case of factors to be considered | | |
| | while designing machine parts to avoid Fatigue Failure? | | |
| Option A: | The variation in the size of the component should be as gradual as possible. | | |
| Option B: | The holes, notches and other stress raisers should be avoided. | | |
| Option C: | A smooth finish of outer surface of the component increases the fatigue life. | | |
| Option D: | The material with high fatigue strength shouldbe avoided. | | |
| | | | |
| 5. | Which of the following is a permanent fastening | | |
| Option A: | Bolts | | |
| Option B: | Rivets | | |
| Option C: | Keys | | |
| Option D: | Cotter | | |
| | | | |
| 6. | Failure of a material is called fatigue when it fails | | |
| Option A: | at the elastic limit | | |
| Option B: | below the elastic limit | | |
| Option C: | at the yield point | | |
| Option D: | below the yield point | | |

| 7. | The maximum bending stress, in a curved beam having symmetrical section, | | | |
|-----------|---|--|--|--|
| | always occur, at the | | | |
| Option A: | centroidal axis | | | |
| Option B: | neutral axis | | | |
| Option C: | outside fibre | | | |
| Option D: | inside fibre | | | |
| | | | | |
| 8. | Select an appropriate option for a diagram | | | |
| | | | | |
| | $\begin{array}{c} \sigma_{max} \\ \sigma_{v} \\ \sigma_{v} \\ \sigma_{min} \\ \sigma_{$ | | | |
| Option A: | Completely reversed stress | | | |
| Option B: | Repeated Stress | | | |
| Option C: | Fluctuating Stress | | | |
| Option D: | Non Repeated stress | | | |
| | | | | |
| 9. | Which of the following type is not a type of End Connections for Compression | | | |
| | Helical Springs? | | | |
| Option A: | Plain ends | | | |
| Option B: | Ground ends | | | |
| Option C: | Squared ends | | | |
| Option D: | Triangular ends | | | |
| 1 | | | | |
| 10. | The castings produced by forcing molten metal under pressure into a permanent | | | |
| | metal mould is known as | | | |
| Option A: | permanent mould casting | | | |
| Option B: | slush casting | | | |
| Option C: | die casting | | | |
| Option D: | centrifugal casting | | | |
| • | | | | |
| 11. | According to IS : 1076 (Part I)–1985 (Reaffirmed 1990), which is not a preferred | | | |
| | number of the basic series of R5 | | | |
| Option A: | 1.50 | | | |
| Option B: | 1.60 | | | |
| Option C: | 2.50 | | | |
| Option D: | 4.00 | | | |
| · · | | | | |
| 12. | Hooke's law holds good upto | | | |
| Option A: | yield point | | | |
| Option B: | elastic limit | | | |
| Option C: | plastic limit | | | |
| Option D: | breaking point | | | |
| | | | | |
| | | | | |

| 13. | Which of the following assumptions is not true in case of curved beams | | |
|-----------|--|--|--|
| Option A: | The material of the beam is perfectly homogeneous and isotropic | | |
| Option B: | The material of the beam obeys Hooke's law | | |
| Option C: | The Young's modulus (E) is not the same in tension and compression | | |
| Option D: | Each layer of the beam is free to expand or contract, independently, of the layer. | | |
| 1 | above or below it. | | |
| | | | |
| 14. | The parts of circular cross-section which are symmetrical about the axis of | | |
| | rotation are made by | | |
| Option A: | hot forging | | |
| Option B: | hot spinning | | |
| Option C: | hot extrusion | | |
| Option D: | hot drawing | | |
| option 21 | | | |
| 15. | Two close coiled helical springs with stiffness $k1$ and $k2$ respectively are | | |
| 101 | connected in series. The | | |
| | stiffness of an equivalent spring is given by | | |
| | | | |
| | (a) $\frac{n_1 \cdot n_2}{k_1 + k_2}$ (b) $\frac{n_1 - n_2}{k_1 + k_2}$ | | |
| | $\kappa_1 + \kappa_2 \qquad \qquad$ | | |
| | $k_1 + k_2$ $k_1 - k_2$ | | |
| | (c) $\frac{1}{k_1 + k_2}$ (d) $\frac{n_1 + n_2}{k_2 + k_3}$ | | |
| | $n_1 \cdot n_2$ $n_1 \cdot n_2$ | | |
| Option A: | | | |
| Option B: | (d) | | |
| Option C: | | | |
| Option D: | (b) | | |
| 1.6 | | | |
| 16. | The residential compressive stress by way of surface treatment of a machine | | |
| | member subjected to fatigue loading | | |
| Option A: | Improves the fatigue life | | |
| Option B: | does not affect the fatigue life | | |
| Option C: | deteriorates the fatigue life | | |
| Option D: | immediately fractures the specimen | | |
| | | | |
| 17. | In determining the strength of the knuckle joint for the various methods of failure, | | |
| | which of the assumptions is correct | | |
| Option A: | The stress is concentrated at pin | | |
| Option B: | The load is uniformly distributed over each part of the joint. | | |
| Option C: | The stress is concentrated at ends | | |
| Option D: | The load applied is different for every part | | |
| 10 | | | |
| 18. | In leaf springs, the longest leaf is known as | | |
| Option A: | Lower leaf | | |
| Option B: | Master leaf | | |
| Option C: | Upper leaf | | |
| Option D: | Middle leaf | | |
| | | | |
| | | | |
| 10 | x x y y y y y y y y y y | | |
| 19. | In a close coiled helical spring, the spring index is given by D/d where D and d | | |

| | are the mean coil diameter and wire diameter respectively. For considering the | | | |
|-----------|--|---|--|--|
| | effect of curvature, the Wahl's stress | | | |
| | factor K is given by | | | |
| | (a) $\frac{4C-1}{4C+4} + \frac{0.615}{C}$ | (b) $\frac{4C-1}{4C-4} + \frac{0.615}{C}$ | | |
| | (c) $\frac{4C+1}{4C-4} - \frac{0.615}{C}$ | (d) $\frac{4C+1}{4C+4} - \frac{0.615}{C}$ | | |
| Option A: | (c) | | | |
| Option B: | (d) | | | |
| Option C: | (a) | | | |
| Option D: | (b) | | | |
| | | | | |
| 20. | Torsional strength of shaft is written as | | | |
| | (a) $\frac{\pi}{32} d^4 \tau$ | (b) $d \log_e \tau$ | | |
| | (c) $\frac{\pi}{16} d^3 \tau$ | (d) $\frac{\pi}{32} d^3 \tau$ | | |
| Option A: | (c) | | | |
| Option B: | (d) | | | |
| Option C: | (a) | | | |
| Option D: | (b) | | | |

| Q2. | Solve any Two Questions out of Three (10 marks each) |
|-----|--|
| А | Design a Knuckle joint subjected to an axial pull of 10KN. Selecting suitable material for all the parts decide the allowable stresses. Design should include figures for the Joint and failure areas? |
| В | A shaft is supported by two bearings placed 1 m apart. A 550 mm diameter pulley is mounted at a distance of 350 mm to the right of left hand bearing and this drives a pulley directly below it with the help of belt having maximum tension of 2.25 kN. Another pulley 350 mm diameter is placed 210 mm to the left of right hand bearing and is driven with the help of electric motor and belt, which is placed horizontally to the right. The angle of contact for both the pulleys is 180° and $\mu = 0.24$. Determine the suitable diameter for a solid shaft, allowing working stress of 63 MPa in tension and 42 MPa in shear for the material of shaft. Assume that the torque on one pulley is equal to that on the other pulley. |
| С | Draw a crane hook and check for critical sections for a load of 12 tonnes. |

| Q3. | Solve any Two Questions out of Three | 10 marks each | |
|-----|--|---------------|--|
| А | A bracket is welded to the vertical column by means of two fillet welds as shown in the figure. Determine the size of the welds, if the permissible shear stress in the weld is limited to 70 N/mm ² . | P = 10 kN | |
| В | Design a bushed-pin type of flexible coupling to connect a pump shaft to a motor shaft transmitting 22 kW at 960 r.p.m. The overall torque is 10 percent more than mean torque. The material properties are as follows : (a) The allowable shear and crushing stress for shaft and key material is 40 MPa and 80 MPa respectively. (b) The allowable shear stress for cast iron is 15 MPa. (c) The allowable bearing pressure for rubber bush is 0.8 N/mm2. (d) The material of the pin is same as that of shaft and key. | | |
| С | Design and draw a valve spring of a petrol engine for the following operating conditions : Spring load when the valve is open $= 400$ N, Spring load when the valve is closed $= 250$ N Maximum inside diameter of spring $= 25$ mm, Length of the spring when the valve is open $= 40$ mm, Length of the spring when the valve is closed $= 50$ mm, Maximum permissible shear stress $= 400$ MPa | | |
